

TARANIS RESOURCES

Brand Guidelines

Unlocking the Hidden Engine of the Silver Cup District

1. Executive Summary

Taranis Resources (TSX.V: TRO | OTCQB: TNREF) has evolved beyond the profile of a traditional junior explorer. After 15 years of methodical exploration, compiling a massive database from over 250 drill holes, and completing a 100% consolidation of the historic Silver Cup Mining District, the company is transitioning from "understanding the deposit" to "unlocking district-scale discovery potential". This manual establishes a premium, institutional-grade brand identity that psychologically communicates scarcity, advanced geological understanding, and a generational opportunity to investors.

2. Brand Vision

To revitalize world-class historic mining districts through advanced 3D geoscience, revealing massive, underlying magmatic systems to create multi-generational value.

3. Mission

To systematically unlock the district-scale potential of the Silver Cup Mining Belt by combining patient capital, rigorous scientific intelligence, and responsible environmental stewardship, while earning property rights through productive labor.

4. Core Values

Scientific Rigor: Exploration driven by state-of-the-art predictive targeting, 3D geophysical inversions, and AI, rather than surface-level prospecting.

Patient Capital: Prioritizing methodical, high-quality exploration over promotional shortcuts, allocating funds directly "into the ground".

Unmatched Shareholder Alignment: A highly vested, stable management team intact for over 20 years with substantial insider ownership.

Responsible Stewardship: A commitment to defining legitimate ownership through active labor, stringent reclamation programs, and transparent First Nations and community engagement.

5. Brand Positioning

One-Sentence Positioning: Taranis is not simply exploring a deposit—it is unlocking an entire mineral district through science-driven discovery.

One-Paragraph Positioning: Backed by a highly vested management team and decades of disciplined capital investment, Taranis pairs a fully permitted, de-risked polymetallic resource with the exponential upside of a 14-km district-scale magmatic engine.

Positioning Narrative: For over a century, the Silver Cup District was fragmented into small, isolated high-grade mines. Taranis has quietly consolidated 100% of this historic camp. Rather than chasing short-term retail hype, we have spent 15 years building an unmatched 3D geological database. We have proven that the existing 2.8 km Thor deposit is merely the "Trunk" of a massive underlying magmatic "Elephant." For institutional and astute retail investors, Taranis represents an underfollowed, high-conviction opportunity where precision science meets district-scale scale.

6. Brand Promise

We promise to protect shareholder capital through disciplined allocation, prioritizing rigorous, data-driven exploration that systematically advances a de-risked resource toward a major valuation re-rating.

7. Brand Personality

Archetype: The Sage (driven by deep geological intelligence) meets The Explorer (charting the unknown depths). Personality Traits: Confident, intelligent, professional, premium, scientifically rigorous, and patient.

8. Brand Voice

Tone: Technical credibility combined with strategic vision and investor psychology. It must cultivate a sense of hidden value and asymmetric upside.

Guidelines: Use polished business English. Avoid excessive technical jargon, retail-investor hype language ("moonshot", "massive pump"), exclamation points, and generic mining clichés. Sentences should be concise, intentional, and impactful.

9. Messaging Framework

Pillar 1: District Scale. Headline: Consolidating a Historic Mineral Province. Proof: 100% control of a 14-km trend spanning >6,400 hectares with over 50 historic mines.

Pillar 2: The Magmatic Engine. Headline: Revealing the "Elephant." Proof: Deep magnetotellurics (MT) and 3D modeling have identified a 1.3 km diameter underlying I-1 intrusive target.

Pillar 3: De-Risked Foundation. Headline: A Foundation of Enduring Value. Proof: NI 43-101 resource hosting 20M oz AgEq, near-surface polymetallic mineralization, and a fully permitted 10,000-tonne bulk sample plant.

Pillar 4: Precision Science. Headline: 15 Years of Geological Intelligence. Proof: Over 250 drill holes, AI predictive targeting, and Gresens alteration mass-balance analysis.

10. Competitive Differentiation

1. **Strategic Land Consolidation:** Complete, unencumbered control of an entire historic mining district, making the company a prime acquisition target for majors seeking scale.

2. **Management Alignment:** A cohesive team intact for two decades with heavily vested insider ownership, ensuring decisions benefit long-term shareholders.
3. **The "Linked Porphyry" Model:** The unique technological edge of connecting high-grade surface epithermal veins to a massive bulk-mineable porphyry system below, offering dual avenues for value.

11. Visual Identity

The visual identity must feel like a hybrid between an institutional investment thesis and high-end cinematic science. It relies on a dark-themed, sophisticated design to make 3D geological models and metallic accents pop.

- **Celtic Inspiration ("Taranis" God of Thunder):** Avoid fantasy themes. Instead, subtly incorporate the "Thunder" motif through high-contrast, glowing geophysics (e.g., brightly colored conductivity anomalies against black backgrounds) that evoke electrical/storm energy, maintaining strict institutional credibility.

12. Logo

We promise to protect shareholder capital through disciplined allocation, prioritizing rigorous, data-driven exploration that systematically advances a de-risked resource toward a major valuation re-rating.

Primary logo

The shape: The Taranis Resources logo is built around a bold, geometric monogram that combines the letters "T" and "R" into a single, integrated emblem. Its thick, rounded forms and balanced proportions create a strong, stable silhouette that conveys confidence, permanence, and structural integrity. The

monogram stands independently as a recognizable brand mark while visually reinforcing the company's initials.

The symbol: The monogram represents more than the initials of the company—it symbolizes the foundation of Taranis Resources' identity. The interlocking T and R communicate unity between exploration, science, and resource development, while the bold construction reflects strength, reliability, and long-term value creation.

Positioned above the "i" in Taranis is a stylized Celtic wheel, inspired by the ancient symbol associated with Taranis, the Celtic god of thunder. This subtle detail connects the brand to its namesake, representing power, discovery, resilience, and the enduring forces of nature. It also reinforces the company's commitment to unlocking the geological potential hidden beneath the surface.

The style: The logo combines modern corporate design with heritage-inspired symbolism. Clean geometric lines, generous negative space, and a minimalist composition give the brand a professional, institutional appearance suited to investors and the mining industry.

The typography pairs a classic serif wordmark with a contemporary emblem, creating a balance between tradition and innovation. The dark charcoal color conveys professionalism, stability, and technical expertise, while the deep blue accent represents trust, intelligence, and scientific exploration. Together, these elements create a timeless identity that communicates credibility, technical excellence, and long-term vision.

13. Colors

Our primary colors

Deep Lithosphere (Primary Background)
#1A1C20
A rich, dark charcoal/black. Provides a cinematic backdrop that makes 3D geological models and gold accents visually pop.

Aurum Gold (Primary Accent)
#D4AF37
Used sparingly for critical highlights, premium UI elements, and key data points. It subtly communicates value and scarcity.

Our secondary colors

Core Silver
#E0E2E5
A crisp, metallic light grey used for body text and secondary borders against the dark backgrounds.

Geophysics Blue
#2A5A8C
Reserved strictly for data visualization, 3D inversion models, and infographic elements (like drill hole traces or anomalous heat maps).

Copper
#B87333
Reserved strictly for data visualization, 3D inversion models, and infographic elements (like drill hole traces or anomalous heat maps).

White
#FFFFFF

Color combinations and accessibility

14. Typography

Typography Hierarchy
Hero Titles: Marcellus 64–80 px
Section Title: Marcellus 42–56 px
Body: Manrope 18–20 px
Small Labels: Manrope SemiBold 12–14 px
Uppercase: Letter spacing +8%

Headings	Body

14. Photography Style

Field Work & Terrain: Majestic, moody shots of the Great Northern Mountain and Trout Lake. Showcase the massive, rugged scale.

Science in Action: High-resolution close-ups of gloved hands holding massive sulfide drill core.

Technology: Geologists operating laptops displaying colorful 3D Geoscience Analyst software in the field.

Lighting: Cinematic, dark, and slightly desaturated to allow metallic rocks to stand out. Avoid cheap stock imagery.

15. Graphic Language

3D Models: The signature visual is the pitch-black 3D block model showing the colorful epithermal "Trunk" over the massive green/orange "Elephant" intrusive.

Maps: Clean, vector-style maps with minimal topographic noise, clearly highlighting the 14-km trend and 100% property boundary.

Data Visualization: Dark backgrounds with steel blue headers. No cluttered gridlines.

16. Website Design Principles

The homepage must follow a deliberate investor journey:

Hero: Establish district-scale magnitude instantly.

The Foundation: Prove the downside is protected with the NI 43-101 Thor resource.

The Upside: Reveal the "Elephant" intrusive target using interactive 3D visuals.

The Proof: Showcase the 15 years of science, 250+ drill holes, and AI technology.

The Catalysts: Highlight the 10,000t bulk sample and upcoming expansion drilling.

The People: Close with the highly vested management team.

18. Applications

- **Fact Sheets (1 & 2 Pagers):** Must not look like standard junior mining flyers. Use deep charcoal backgrounds, large gold headlines, and dominant 3D models. Keep descriptions under 15 words.
 - **Conference Booths:** Edge-to-edge dark backgrounds featuring a massive 3D visualization of the "Elephant" and the 14-km trend.
 - **Social Media:** Objective and technical. Share drill results on dark square graphics with large text (e.g., **5.25m @ 26.2 g/t Ag**) overlaying core photography.
-

19. Brand Checklist

Before publishing any external material, verify:

1. **Does this reinforce district scale rather than a single deposit?**
 2. **Does this demonstrate scientific credibility and technological edge?**
 3. **Does this support investor confidence and communicate a protected downside?**
 4. **Does this maintain a premium, dark-themed, institutional appearance without retail hype?**
 5. **Does this strengthen the narrative of patient capital and management alignment?**
-

20. Conclusion

The Taranis Resources brand must consistently reflect its reality: a company that has rejected promotional shortcuts in favor of executing a 15-year, science-driven master plan. By maintaining an aesthetic and voice that is sophisticated, data-driven, and highly institutional, Taranis will successfully attract the strategic partners, institutional funds, and astute investors required to realize the full value of the Silver Cup Mining District.
